

AI Course Builder

Automate the Creation of Online Training

Using the **AI Course Builder**, you can rapidly build comprehensive online courses by uploading PDF documents or providing detailed instructions to the AI. Automatically generate course outlines, image-based slides, and multiple-choice questions to streamline your training development.

Upload your training documents or describe your course to generate an outline.

Review and approve AI-generated slide text, images, and voice narrations.

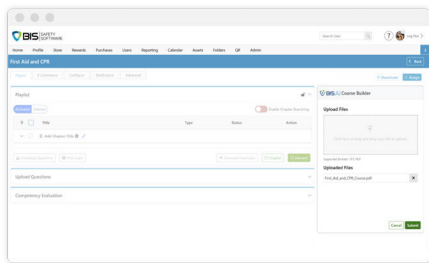

Automatically generate chapter questions and final exams based on approved slides.

Building comprehensive online courses used to be time-consuming, but not anymore? **Let AI do the work for you.**

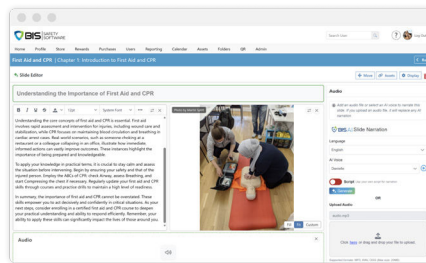

Simple Set-Up

Many course authoring tools require extensive time and effort to learn, setup, format and manage. Ours can generate a full course in a few easy steps:

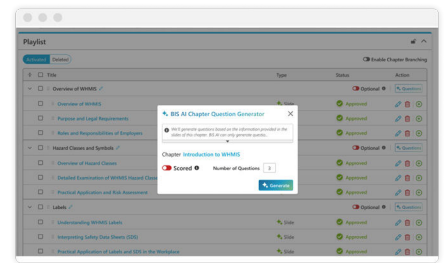

Step 1

Chat with BIS AI and upload your source files (TXT or PDF) to create a structured table of contents.

Step 2

Customize your slides by approving AI-generated text, selecting photos, and generate a custom AI voiceover.

Step 3

Generate scored or non-scored assessments, including multiple-choice and multi-select questions, based on your approved content.

Features

Automated Slide Creation

BIS AI generates slide text based on your uploaded PDFs or detailed descriptions. Administrators can easily swap text and image placements or manually adjust the content using the rich-text editor.

AI Voice Narration

Automatically generate slide audio using AI that reads your slide text or upload a custom script for each slide. The system also allows administrators to translate the narration into different languages and control playback speed.

Integrated Media & Stock Photos

Seamlessly search and embed stock photos directly through a built-in integration. Alternatively, users can upload their own images, adaptive videos, and SCORM files.

AI Question Generator

Instantly create exams and assessments without writing them from scratch. The AI Course Builder reads your approved slides and automatically generates chapter questions and final exams to test user comprehension of the information presented in the course. Generate multiple-choice, multi-select, and true/false questions, and choose whether they are scored or non-scored.
